2. Advantages of Datapower
3. Security Handling in Datapower
4. Creation of an Application Domain
5. User Access
6. File Management
7. CLI Commands
8. Firmware Upgradation

Datapower Admin

11. Configuration Checkpoints and Backup

12. Datapower Appliance Set up

13. Crypto Objects

14. Crypto Certificate

15. Crypto Key

16. Crypto Tools

17. SSL Connectivity

- SSL Proxy Profile
- Forward Profile
- Reverse Profile
- Two-Way SSL
- Crypto Identification Credentials
- Crypto Validation Credentials

18. Front Side Handler (FSH)

- HTTP FSH
- HTTPS FSH
- MQ FSH

19. WSDL

20. XSD

21. Different Backend connection with Datapower

- Static Backend
- Dynamic Backend

Datapower Admin

- AAA
- Transform
- Sign
- Verify
- Encrypt
- Decrypt
- Result

24. Message Level Security using AAA

- AAA Configuration using LDAP
- AAA Configuration using Certificate
- AAA using AAAinfo.xml

25. Processing Rules

- Request Rule
- Response Rule
- Error Rule

26. WSP Configuration

27. MPGW Configuration

28. XML Firewall

29. Troubleshooting Mechanisms

- Usage of Probe
- System Logs

30. Datapower Variables

- Local

Datapower Admin

- Global

31. Logging Mechanism

- Log Category
- Log Target

32. SOAPUI
